PROFESSIONAL SUMMARY

Operations & Automation Manager with 3+ years at ConsultBae, progressing from Operations Executive to Manager by identifying process bottlenecks and building automation systems using AI-assisted development. Background is in recruitment operations — over time shifted focus to designing and shipping the internal tools that power those operations. Use AI tools (Claude, ChatGPT, Gemini) as a development accelerator to build practical business systems, not as a substitute for understanding the problem.

PROFESSIONAL EXPERIENCE

Manager — Sourcing & Automation · [ConsultBae](#)

2026 – Present

- Lead automation initiatives across sourcing and recruitment operations; own end-to-end design, build, and deployment of internal business systems.
- Build workflow automation solutions using Google Apps Script, React, and Flask; support and maintain systems used daily by a 35+ person recruiting team.
- Coordinate with Account Managers to identify operational bottlenecks and translate them into automation projects.
- Train recruiters on new tools and workflows; troubleshoot system issues and manage adoption.
- Manage remote interns, assign daily tasks, and oversee execution of sourcing operations.

Assistant Manager — Sourcing & Operations · [ConsultBae](#)

2025 – 2026

- Built and deployed multiple Google Apps Script automation systems including reporting engines, a compliance tracker, and a knowledge search platform — all using AI-assisted development.
- Automated recruiter performance reporting that was previously done manually each week.
- Developed internal productivity tools that were adopted by the sourcing team for day-to-day operations.
- Identified operational inefficiencies and built lightweight systems to address them.

Associate — Sourcing & Operations · [ConsultBae](#)

2024 – 2025

- Managed end-to-end sourcing operations across multiple concurrent hiring requirements.
- Built reporting frameworks in Google Sheets and Excel to standardise weekly performance tracking.
- Started building small automation scripts to reduce repetitive admin tasks — first step into systems work.
- Coordinated with recruiters and account managers to improve sourcing workflow efficiency.

- Handled recruitment sourcing, candidate management, ATS operations, and reporting.
- Maintained sourcing trackers, operational dashboards, and compliance logs.
- Supported hiring teams across multiple client accounts in meeting recruitment targets.

PROJECTS

CB Nexus — Company-Wide Recruitment Operating Platform

Stack: Google Apps Script, Google Sheets, JavaScript, CacheService, LockService

- Designed and built a modular, role-based operating platform consolidating attendance, leave, sourcing, screening, compliance training, and admin controls into one system for a 35+ person team.
- Architected a pluggable module-registry pattern so every business function runs as an independently loadable module behind one role-based permission system (Recruiter / Account Manager / HR / Admin).
- Built a gamified weekly client-intelligence quiz with streak multipliers, lifelines, and live leaderboards to strengthen account managers' client knowledge.
- Led a full production security and reliability audit across 66 files — adding admin authorization guards, resolving concurrency issues with LockService, and reducing payload size for non-admin roles.

ZenAlpha ATS — Applicant Tracking System

Stack: React, Tailwind CSS, Flask, MongoDB Atlas, Supabase, Vercel

- Designed and built a full-stack ATS using AI-assisted development to replace spreadsheet-based recruiting operations.
- Features include: Kanban candidate pipeline, resume upload and cloud storage, Gmail automation hub, screening questions, reporting matrix, and CSV export.
- Handled full build independently — database design, backend API, frontend UI, and Vercel deployment.

Leave Management & Workforce Automation Platform

Stack: Google Apps Script, Google Sheets, Google Forms, Gmail

- Built a leave management platform covering leave tracking, WFH quotas, comp-off management, monthly accruals, and policy enforcement.
- Employees request leave and check balances via a self-service flow — automated email responses handle the interaction without HR manual effort.
- Built using AI-assisted development on Google Workspace; replaced a fully manual HR tracking process.

Recruitment Automation Suite — 5 Internal Tools

Stack: Google Apps Script, Google Sheets, Gmail API

- Load Balancer: calculates sourcing demand and distributes recruiter workload automatically based on capacity.
- Performance Intelligence: auto-generates weekly, monthly, and bi-monthly recruiter reports, leaderboards, and KPI summaries.
- Knowledge Search Engine: self-service search for requirements, screening questions, client records, and positions.
- Compliance Tracker: monitors day-end report submissions, flags late or duplicate entries, tracks leave compliance.
- Operations Command Center: unified dashboard for backend sync, assignments, and productivity monitoring.

TECHNICAL SKILLS

AUTOMATION & SYSTEMS

Google Apps Script · Gmail Automation · Workflow Automation · AI-Assisted Development

DATA & REPORTING

SQL · Google Sheets · Excel · Basic Power BI

DEVELOPMENT & PLATFORMS

React · Flask · MongoDB Atlas · Supabase · Firebase · Vercel

Built using AI-assisted development — not a traditional software engineering background

AI TOOLS

Claude · ChatGPT · Gemini · Prompt Engineering

EDUCATION

B.Tech — Chemical Engineering · [NIT Hamirpur \(National Institute of Technology\)](#)

2018 – 2022

CGPA: 9.07 / 10

Research Publication

Computational Thermodynamics · *Published 2024*

Simulated carbon phase transitions via statistical modeling as part of a four-person research team.

CERTIFICATIONS

Google Data Analytics Professional Certificate

SQL Certifications · Data Analytics & Visualisation Certifications
